

Risk ID	WBS task(s) / risky area	Why risky	Precaution / plan
R1	2.2.2 — Workflow recovery	Restart may lose progress or repeat actions.	Save checkpoints and test resume without duplicate actions.
R2	3.1.3 — Job posting	Hiring-site API access may be unavailable.	Confirm integration options and keep a manual fallback.
R3	3.2.2–3.2.3 — OCR and extraction	CV information may be extracted incorrectly.	Test different CV formats and review uncertain results.
R4	3.3.1–3.3.3 — Screening	AI may wrongly reject suitable candidates.	Require evidence and human review for uncertain cases.
R5	3.4.1, 3.6.1, 6.1.4 — Human approvals	Candidates may advance without approval.	Enforce backend approval gates and save decisions.
R6	3.5.1–3.5.3 — Scoring	Inconsistent weights or scores may produce unfair comparisons.	Use one approved rubric per job and validate calculations.
R7	3.5.4, 9.1.1–9.1.2 — Parallel processing	Candidate data may mix or work may run twice.	Isolate candidate runs, limit workers, and test concurrency.
R8	4.1.1–4.1.3 — Video interviews	Join links or network failures may disrupt interviews.	Protect links and test browsers and reconnect behavior.
R9	4.2.1–4.2.4 — Transcription	Speech may be lost or assigned to the wrong speaker.	Separate participant audio, save transcript segments, and flag gaps.
R10	5.1.1–5.1.5 — Interview analysis	AI may misunderstand answers or use weak references.	Use reliable sources, transcript evidence, and human review.
R11	5.2.1–5.2.4 — Final assessment	Missing or outdated evidence may mislead reports.	Validate evidence versions and show missing information.

R12	6.1.1–6.1.5 — CV integrity	Attacks may be missed or clean CVs flagged.	Test clean and malicious CVs; review flags before rejection.
R13	8.1.1–8.1.3 — Schedule and stretch scope <i>(related: 1.2.2)</i>	Complexity or stretch features may delay delivery.	Prototype risky features early and prioritize core completion.
R14	9.1.3 — External service failures	Failed calls or exhausted retries may interrupt workflows.	Use timeouts, bounded retries, and visible failure states.
R15	9.2.1 — Privacy and security	Candidate data or secrets may be exposed.	Restrict access, sanitize logs, and test deletion.
R16	9.4.3 — Clean-machine Docker setup	Missing dependencies or configuration may prevent startup.	Test a fresh clone with Docker and document required configuration.
